READING ROOM

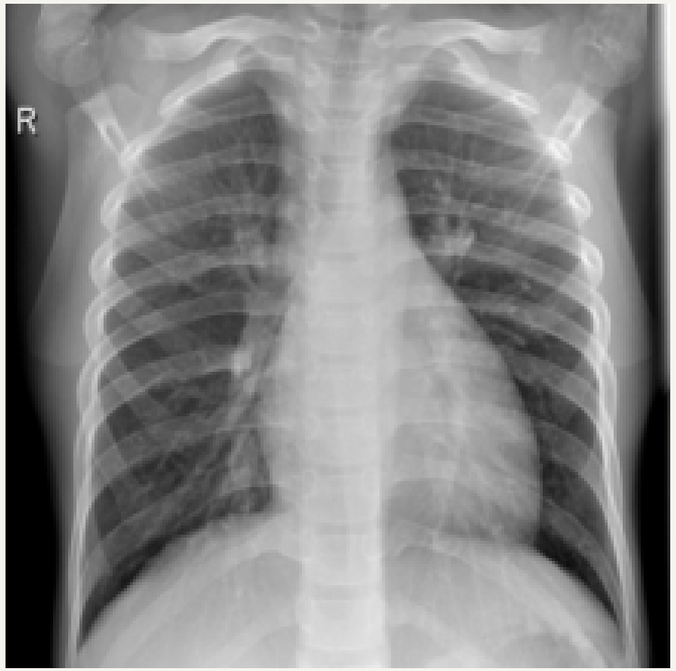

Pneumonia from chest X-rays

Samarth Shekhar Meghavi Rao
Rachit Kumar Harshal Nerpagar

Computer Vision / M1-M5

Two dataset labels

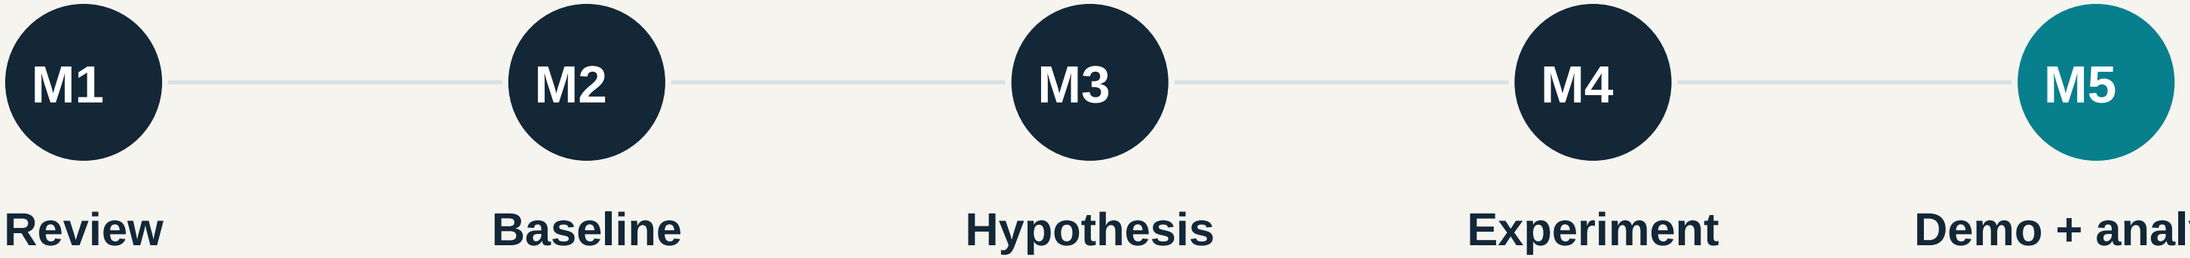

Normal

Pneumonia

We predict a benchmark label.

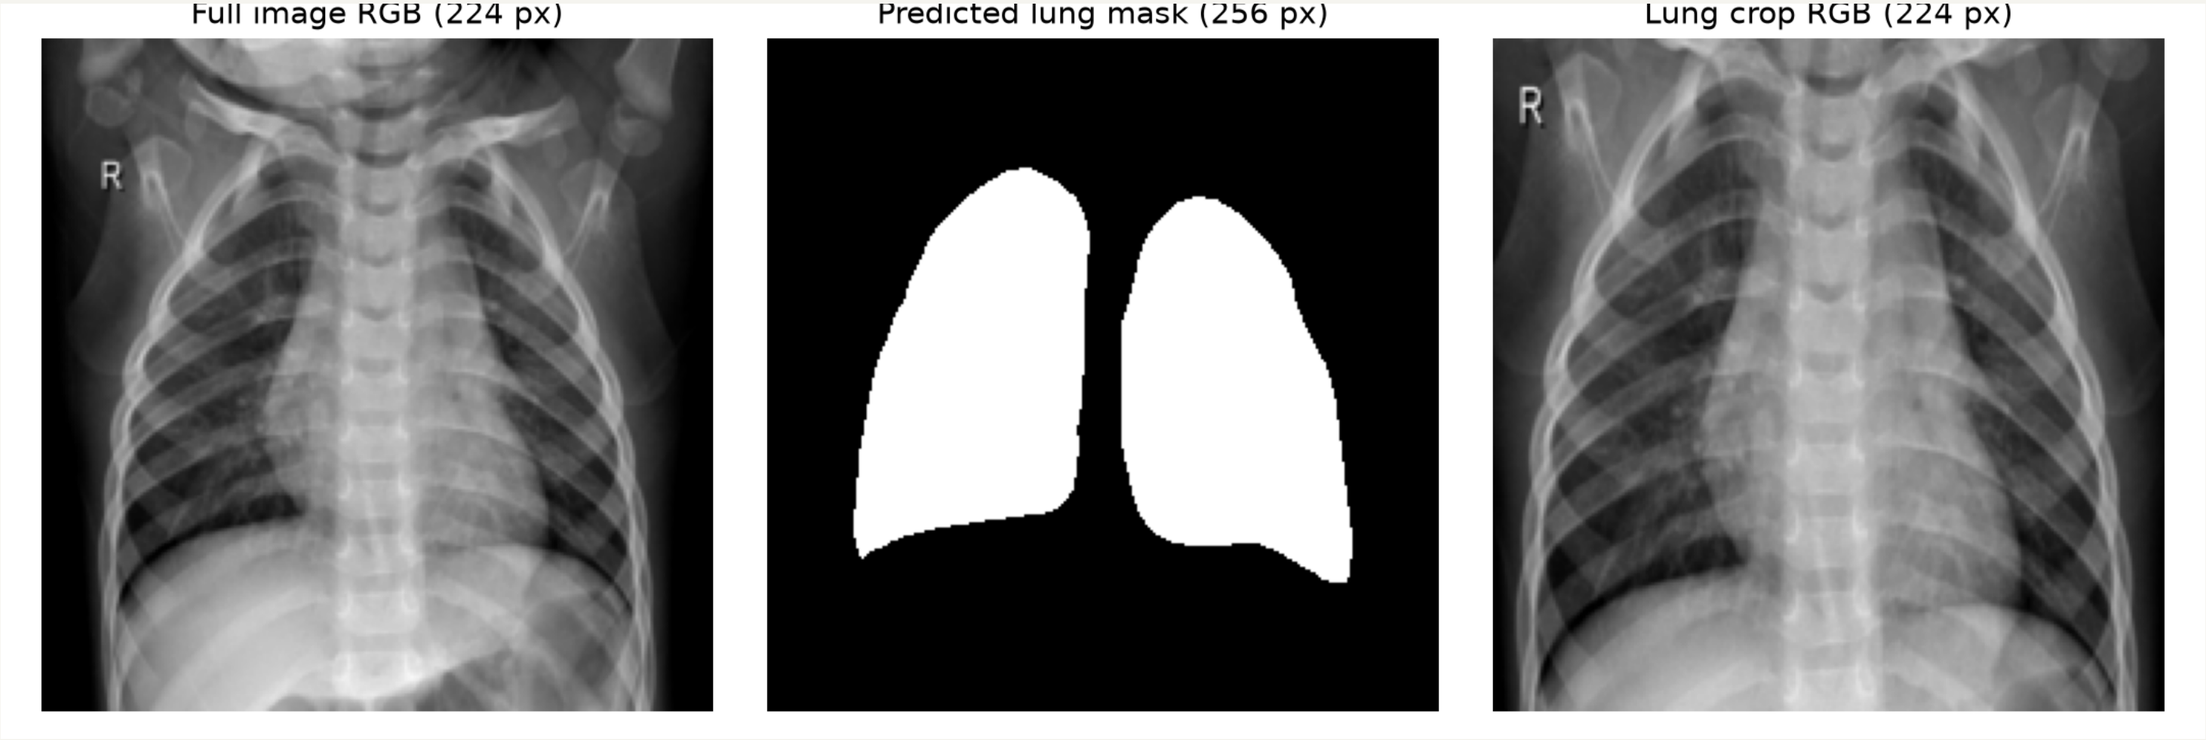

Our project journey

Review	Baseline	Hypothesis	Experiment	Demo + analysis
87.18%	85.74%	92.15%	93.75%	
Cached 5	Audit 15	Online 5	Final pilot	

Historical runs used different settings.

Lung-focused input

CNN + **Transformer**

Two pretrained image readers

Four matched comparisons

	Full image	Lung crop
CNN	A 86.86%	B 92.63%
CNN + ViT	C 88.14%	D 93.75%

Same split. Five classifier-head epochs.

Final model results

93.75%

Accuracy

585 / 624 images correct

98.21%

Pneumonia recall

383 / 390 pneumonia cases found

---

32 false alarms

7 missed cases

Mistakes and limits

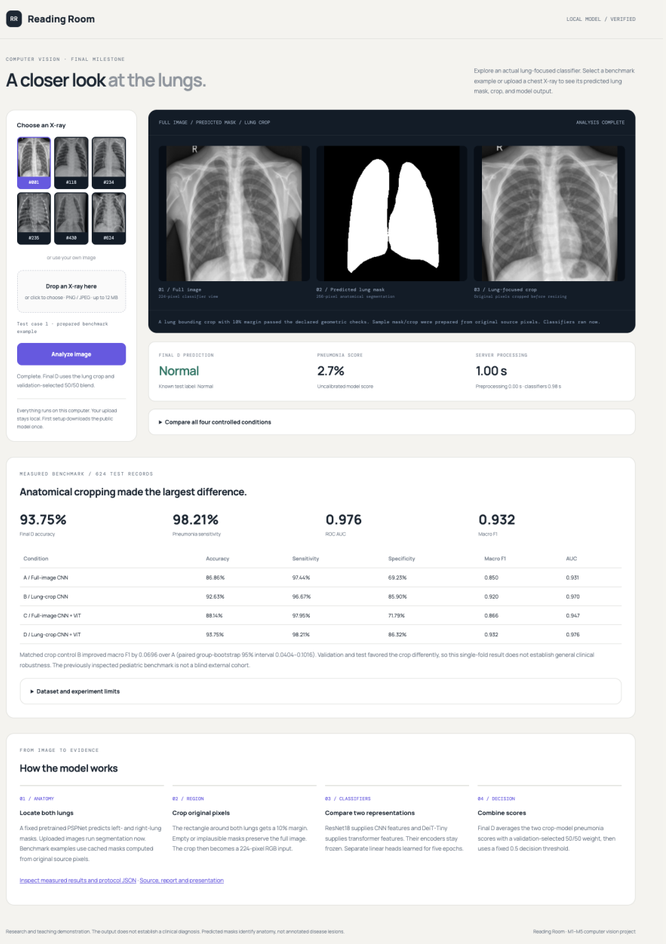

False alarm

Missed pneumonia

Validation and test disagreed.
